1.00  General

1.01  Permit Applicant and Permit Issuance

A. Any construction activity in which soil is disturbed, the contractor shall be required to implement an erosion control plan as required by Decatur County ordinance(s).

B. Erosion control methods and procedures shall comply with the most current version of 327 IAC 15-5 (Rule 5). If any inconsistencies with 327 IAC 15-5 have been approved by IDEM, the Division of Soil Conservation, or Decatur County, the more stringent shall apply.

C. Decatur County reserves the right to inspect any land-disturbing activities and the related methods of erosion control for compliance.

1.02  Definitions

A. "Decatur County" means the designated unit of government given the authority is issue permits. Also any employee or representative whom they shall specifically delegate a responsibility.

B. "Person" means any entity, including any individuals, corporation, or public body holding title to or having an interest in land, operating, leasing, renting, or having made other arrangements with the title holder by which the title holder authorizes use of his or her land.

C. "Agricultural land use" means use of land for the production of animal or plant life, including forestry, pasturing or yarding livestock, and planting, growing, cultivating, and harvesting crops for human or livestock consumption.

D. "Nonagricultural land use" means commercial use of land for the manufacturing and wholesale or retail sale of goods and services, residential or institutional use of land intended primarily to shelter people, highway use of land including lanes, alleys, streets, highways and other land used not included under agricultural land use.

E. "Land-disturbing activity" means any manmade change of the land surface including removing vegetative cover, excavating, filling, transporting, and grading. In the context of this Chapter, it includes only nonagricultural land-disturbing activities on sites which also require a local improvement location permit or an approved subdivision plat.

F. "Site" means the entire area included in the legal description of the land on which land-disturbing activity has been proposed in the permit application.
G. "Runoff" means the portion of the precipitation from such sources as rainfall, snowmelt, or irrigation water that flows over the ground surface.

H. "Erosion" means the detachment and movement of soil, sediment, or rock fragments by water, wind, ice, or gravity.

I. "Erosion control measure" means a practice or a combination of practices to control erosion and resulting sedimentation.

J. "Erosion Control Plan" means a written description and/or plans of pertinent information concerning erosion control measures designed to meet the requirements of this Chapter as submitted by the applicant for the review and approval of Decatur County.

1.03 Erosion Control Plan

A. No person shall begin a land-disturbing activity without receiving approval of an erosion control plan. An application should be made at the time of the preliminary plat submittal or local improvement location permit application to minimize the time delay before a project can begin. By submitting an application, the applicant is implying that Decatur County has been given permission to enter the site to obtain information required for review of the erosion control plan.

B. Content of Erosion Control Plan for Land-Disturbing Activities Covering One or More Acres in a given site.

1. Existing Site Map: A map of existing site conditions on a minimum scale of one inch equals 100 feet and adequate to show the site and adjacent areas, including:
   a. Site boundaries and adjacent lands which accurately identify the site location;
   b. Lakes, streams, wetlands, channels, ditches, and other watercourses on and adjacent to the site;
   c. One hundred-year flood plains, floodway fringes and floodways;
   d. Location of the predominant soil types as identified by the Decatur County Natural Resources Conservation Services Soil Survey or as determined by a professional soil scientist;
   e. Vegetative cover such as grass, weeds, and trees;
   f. Location and dimensions of stormwater drainage systems, field tile, and natural drainage patterns on and immediately adjacent to the site;
   g. Locations and dimensions of utilities, structures, roads, highways, and paving; and
   h. Site topography at a contour interval not to exceed two feet.

2. Plan of final site conditions. A plan of final site conditions on the same scale as the existing site map showing the site changes.

3. Site construction plan. A site construction plan including;
a. Locations and dimensions of all proposed land-disturbing activities;
b. Locations and dimensions of all temporary soil stockpiles;
c. Locations and dimensions of all erosion control measures necessary to meet the requirements of this Chapter;
d. Schedule of the anticipated starting and completion dates of each land-disturbing activity, including the installation of erosion control measures needed to meet the requirements of this Chapter; and
e. Provisions for maintenance of the erosion control measures during construction.

C. Content of Erosion Control Plan for Land-Disturbing Activities Covering Less than One Acre in a Given Site
   1. An erosion control plan statement describing the site and erosion control measures and including a development schedule and a simple map showing the locations of the control measures is all that is required.

D. Review of Erosion Control Plan
   1. The Decatur County Area Planning shall promptly review the application and erosion control plan in conjunction with the subdivision plat and local improvement permit application to determine whether the requirements of this Chapter have been met. If the conditions are not met, the Decatur County Area Planning shall inform the applicant in writing and either may require additional information or may disapprove the plan. If requested additional information is submitted, the Decatur County Area Planning shall again determine where the plan meets the requirements of this Chapter. If the plan is disapproved, the Decatur County Area Planning shall inform the applicant in writing, giving reasons for disapproval.

E. Permits
   1. Surety Bond - As a condition of approval and issuance of the permit, the Decatur County Area Planning may require the applicant to provide a surety bond or an irrevocable letter of credit when the erosion control plan has been approved to guarantee a good faith execution of the erosion control plan and any permit conditions.

   a. Notify the Decatur County Area Planning at least 24 hours before commencing with any land-disturbing activity;
b. Notify the Decatur County Area Planning of the completion of erosion control measures within seven days after their installation;
c. Obtain permission from the Decatur County Area Planning prior to modifying the erosion control plan;
d. Install all erosion control measures as identified in the approved erosion control plan;
e. Maintain all road drainage systems, stormwater drainage systems, erosion control measures, and other facilities identified in the
erosion control plan until the project has been terminated (See Section 7 for continuing maintenance responsibility).

f. Where legal, remove sediment resulting from land-disturbing activities from adjacent surfaces and drainageways and/or repair erosion damage to adjacent surfaces and drainageways; and

g. Allow the Decatur County Area Planning to enter the site for verifying compliance with the erosion control plan or for the performing of any work necessary to bring the site into compliance with the erosion control plan.

1.04 Inspection

A. To ensure compliance with the erosion control plan, the Decatur County Area Planning shall inspect sites having ongoing land-disturbing activities at least once a month during the period between March 1 and November 30 and at least twice during the period between December 1 and February 28.

B. If land-disturbing activities are being carried out without a permit, the Decatur County Area Planning shall initiate steps in accordance with Section 150 and 155 of the Decatur County Subdivision Control Ordinance.

1.05 Erosion Control Design Measures

A. All erosion control measures including, but not limited to, those required to comply with this Chapter shall meet the design criteria, standards, and specifications for erosion control measures similar to or the same as those outlined in the *Field Office Technical Guide of the Natural Resources Conservation Service*, and the *Indiana Stormwater Quality Manual*.

C. The *Indiana Stormwater Quality Manual* is available from the Indiana Department of Natural Resources, Division of Soil Conservation, online at [http://www.in.gov/dnr/soilcons/publications/stormwatermanual.html](http://www.in.gov/dnr/soilcons/publications/stormwatermanual.html)

1.06 Control of Erosion and Sediment

A. Control of erosion and sediment is the responsibility of the applicant. Refer to the Erosion Control Ordinance for the authority and penalties that will be enforced. Applicability and requirements are defined as follows:

1. those requiring a subdivision plat approval or local improvement location permit for the construction of commercial, residential, or institutional buildings on any parcel of land.
2. those involving grading, removal of protective ground cover or vegetation, excavation, land filling, or other land-disturbing activity affecting a surface area of 5,000 square feet or more;
3. those involving excavation, filling, or a combination of excavation and filling affecting 400 cubic yards or more soil, sand, gravel, stone, or other material.
4. those involving street, highway, road, or bridge construction, enlargement, relocation, or reconstruction; and
5. those involving the laying, repairing, replacing, or enlarging of an underground pipe or utility for a distance of 300 feet or more.

1.07 Erosion and Other Sediment Control Requirements

A. The following requirements shall be met on all sites.

1. Site Dewatering: Sediment-laden water flowing from the site shall be detained by temporary sediment basins. Also, water shall not be discharged in a manner that causes erosion in the receiving channel.
2. Waste & Material Disposal: Wastes or unused building materials including, but not limited to, garbage, debris, cleaning wastes, wastewater, toxic materials and hazardous substances, shall not be carried by runoff from a site. Proper disposal of all wastes and used building materials, in line with the nature of the waste materials, is required.
3. Tracking: Sediment being tracked from a site onto public or private roadways shall not be allowed. This can be accomplished initially by a well-planned layout of roads, access drives, and parking areas of sufficient width and length. However, protective covering also may be necessary.
4. Sediment Removal: Public or private roadways shall be kept cleared of accumulated sediment. If appreciable sedimentation occurs after a storm event, the sediment shall be deposited on the parcels of lands, if in the site, from where it likely originated.
5. Drain Inlet Protection: All storm drain inlets shall be protected against sedimentation with straw bales, filter fabric, or equivalent barriers meeting accepted design criteria, standards, and specifications.

B. Site Erosion Control: The following items apply only to the time period when land-disturbing activities are taking place:

1. Runoff passing through a site from adjacent area shall be controlled by diverting it around disturbed areas. Alternatively, the existing channel may be improved to prevent erosion or sedimentation from occurring.
2. Runoff from disturbed area shall be controlled by one or more of the following measures:
   a. barring unforeseen weather conditions, all disturbed ground left inactive for seven or more days shall be stabilized prior to the
tenth day by seeding, sodding, mulching, covering, or by other equivalent erosion control measures.
b. with disturbed areas within a site of 10 acres or more, where drainage is in the same direction or where runoff will result in loss of soil, an abatement or recovery program is required. Where feasible, one or more sediment basins shall be constructed. Each sediment basin shall have a depth of at least three feet and have sufficient surface area to trap the sediment. The size of sedimentation basin should be at least one percent of its drainage area. Sediment shall be removed from time to time to maintain a minimum three-foot depth. When the disturbed area is stabilized, continue, the sediment basin shall be maintained by the existing or subsequent landowners. The discharge rate from a sediment basin shall not cause scouring in the receiving channel.
c. with disturbed areas within a site of less than 10 acres, filter fences, straw bales, or equivalent erosion control measures places along all sideslope and downslope sides of the site shall be required. Also, if concentrated flow area to reduce the amount of sediment removed from the site. However, if these measures are not sufficient to control off-site sedimentation, a sediment basin may still be required.

C. Erosion from all storage piles shall be controlled by placing straw bales, filter fence or other appropriate barriers around the piles. Adjacent storm drain inlets shall be protected using similar filter barriers. Moreover, any soil storage pile containing more than ten cubic yards of material may be located closer than 25 feet to a roadway or a drainage channel but shall be covered with tarps or a suitable alternative if in existence for less than seven days. However, if these measures are not sufficient to control off-site sedimentation, a sediment basin may still be required.

2.00 MATERIALS SPECIFICATIONS

2.01 MATERIALS

A. Straw Bales: Bales shall be new, firm, and well compacted straw bales bound with wire or nylon. Minimum size for bales shall be 14" x 18" x 36" when used for dams or filters.
   1. Where grades are 7% or higher, straw bales cannot be used for dams or filters.

B. Temporary Seeding:
   1. Seed mixture for summer planting shall be Annual Rye Grass applied at the rate of 40 pounds per acre combined with White or Red Sweet Clover at the rate of 15 pounds per acre.
2. Seed mixture for fall planting shall be Hard Red Winter Wheat and Winter Rye (grain) mixed in equal proportions and applied at the rate of 100 pounds per acre.
3. Apply 1,000 pounds per acre of 12-12-12 analysis, or equivalent, fertilizer. Work the fertilizer into the soil 2-4 inches deep.

C. Stabilized Construction Roads: These roads shall be constructed of aggregate base course in accordance with Street Specifications in order to prevent erosion.

D. Erosion Blanket: Erosion blanket shall be wood excelsior, straw, or coconut fibers with photodegradable netting. Erosion control blankets shall be as manufactured by North American Green Models S75, S150, and SC150 or approved equal.

E. Limestone-filled sandbags: Fill sandbags approximately halfway with #5 Limestone.

F. Vegetative Filter Strips: Seeding mixture shall be Creeping Red Fescue at the rate of 20 pounds per acre combined with Annual Rye Grass at the rate of 5 pounds per acre.

G. Silt Fence: Fence shall consist of 2 x 2 hardwood posts and woven or non-woven geotextile fabric according to the Field Office Technical Guide of the Natural Resources Conservation Service and the Erosion Control Details.

H. Temporary Stone Construction Entrance/Exit Pad: Use 2 to 3-inch size washed stone (per INDOT standards) over a geotextile fabric.

3.00 CONSTRUCTION REQUIREMENTS

3.01 General

A. Erosion control measures shall be installed to minimize the effects of erosion and siltation/sedimentation caused by this Contract.

B. The Field Office Technical Guide of the Natural Resources Conservation Service shall be used by the Contractor for reference when field conditions dictate additional erosion control measures.

3.02 Installation

A. Straw bale barriers shall be placed as ditch checks and as silt fences. Straw bales shall be staked as detailed in drawing EC-3.
B. Limestone-filled sandbags shall be placed as checkdams and sediment traps. Space checkdams at a distance such that the top of the downstream dam is level with the lowest ground elevation at the upstream dam.

C. Temporary seeding shall be placed on all stockpiles and disturbed areas. No fertilizer, mulch, or topsoil will be required where temporary seeding is sown.
   1. Seeding Methods: Seed shall be applied with equipment approved by the Decatur County Area Planning.
   2. Seeding Period: Between May 1 and August 31, the summer seed mixture shall be used. After September 1 until the ground freezes, the fall seed mixture shall be used.
   3. Contractor is responsible for soil stabilization.

D. Erosion Blankets:
   1. Blankets shall be staked or stapled in place in accordance with manufacturer's instructions.
   2. Blankets shall be placed on all disturbed areas (and where shown on the erosion control plan) with slopes 10:1 or steeper whenever seeding will not be performed within 15 days.

E. Silt fence shall be installed where shown on erosion control plan and/or per the Field Office Technical Guide of the Natural Resources Conservation Service.

F. All perimeter silt barrier systems and point discharge locations(s) from proposed construction activities shall be installed prior to any surface disturbance.

3.03 MAINTENANCE

A. All erosion control measures shall be maintained until the final seeding has been accepted by the Decatur County Area Planning.

B. Straw bales, silt fences and sandbags shall be inspected frequently and repaired or replaced as necessary. After the straw bales, silt fences and sandbags have served their purpose they shall be removed and disposed of off-site. The depressions shall be filled, compacted, and seeded.

C. Washouts and bare spots shall be reseeded.

D. If sedimentation is likely to be a problem after land-disturbing activities have ceased, some or all of the erosion control measures shall be maintained by the applicant or subsequent landowner for as long as the problem exists.

DCAP Adopted - 01/07
EMBEDMENT DETAIL

TIEBACK DETAIL

NOTE:
The spacing of the tiebacks shall equal the spacing of the posts. Additional post depth or tiebacks may be required in unstable soils.
For scour protection use erosion mat for channel lining. Geotextile mat extends under upstream bales. Secure the geotextile fabric beyond the straw bales with wood stakes at 3'-0" intervals.

Straw bales
Upstream edge of geotextile mat should be even with upstream edge of straw bales.

Stagger joints between adjacent rows of bales.

PLAN

Slope varies
4' nom

Stakes driven flush where soil conditions permit

Bottom elevation of end bale shall be equal to or greater than top of lowest middle bale.

FRONT ELEVATION

Ditch checks shall be spaced such that the top of the downstream check is at the same elevation as the toe of the adjacent upstream check.
Riprap ditch check dams shall be spaced such that the top of the downstream check dam is at the same elevation as the toe of the adjacent upstream check dam.
NOTE:

CONSTRUCT PER INDIANA HANDBOOK FOR EROSION CONTROL IN DEVELOPING AREAS.

RIPRAP TO BE INDOT REVETMENT TYPE.

INSPECT ROCK DAM AND BASIN AFTER EACH STORM EVENT OVER 0.5" PER 24 HOURS AND ONCE EVERY TWO WEEKS. IF BASIN DOES NOT DRAIN REPLACE STONE ON UPSTREAM SIDE OF DAM.

AFTER UPSTREAM BASIN IS WELL VEGETATED, REMOVE ROCK DAM. FINE GRADE, SEED AND MULCH REMAINING AREAS.
1. Slope should be 2:1 maximum on the near side with respect to the direction of traffic while the far slope may be 2:1 maximum.

2. This area may be excavated below planned ditch grade to achieve sediment trap capacity. It shall not be excavated to below the bottom elevation of sediment trap riprap.

SECTION A-A

Temp. Berm for sediment trap (overfill 6" for settlement)
NOTE:
The frame shall be wrapped with one continuous piece of geotextile fabric and a 2'-0" overlap shall be provided.
